

2011 Reserves and Non-Reserve Mineralization

As of December 31, 2011

Disclosed in Newmont's 2011 Annual Report filed on February 24, 2012

Non-Reserve Mineralization Definitions and Cautionary Statement

Defined terms and Statement Regarding Reserves and NRM:

Ian Douglas, Newmont's Group Executive of Reserves and Geostatistics, is the qualified person responsible for the preparation of the reserve and NRM estimates in this presentation. The reserves disclosed in this presentation have been prepared in compliance with Industry Guide 7 published by the SEC. Investors are encouraged to read the footnotes to the tables included on slides 28-33, as well as the definitions and cautionary statements included herein.

As used in this presentation, the term "reserve" means that part of a mineral deposit that can be economically and legally extracted or produced at the time of the reserve determination. The term "economically," as used in this definition, means that profitable extraction or production has been established or analytically demonstrated in a full feasibility study to be viable and justifiable under reasonable investment and market assumptions. The term "legally," as used in this definition, does not imply that all permits needed for mining and processing have been obtained or that other legal issues have been completely resolved. However, for a reserve to exist, Newmont must have a justifiable expectation, based on applicable laws and regulations, that issuance of permits or resolution of legal issues necessary for mining and processing at a particular deposit will be accomplished in the ordinary course and in a timeframe consistent with Newmont's current mine plans. Reserves in this presentation may be aggregated from the Proven and Probable classes.

As used in this presentation, the term "non-reserve mineralization" or "NRM" refers to Measured, Indicated and/or Inferred materials, which are exclusive of reserves. Newmont has determined that such NRM would be substantively the same as those prepared using the Guidelines established by the Society of Mining, Metallurgy and Exploration and defined as Resources. Estimates of NRM are subject to further exploration and development, are subject to additional risks, and no assurance can be given that they will eventually convert to future mineral reserves of the Company. In addition, our current or future reserves and exploration and development projects may not result in new mineral producing operations. Even if significant mineralization is discovered and converted to reserves, it will likely take many years from the initial phases of exploration to development and ultimately to production, during which time the economic feasibility of production may change.

Additionally, references to "attributable ounces," "attributable pounds" and "attributable mineralization" in this presentation are intended to mean that portion of gold or copper produced, sold or included in Proven and Probable reserves or NRM that is attributable to our ownership or economic interest.

For a description of the key assumptions, parameters and methods used to estimate mineral reserves and mineralized material, as well as a general discussion of the extent to which the estimates may be affected by any known environmental, permitting, legal, title, taxation, socio-political, marketing or other relevant factors, please see Newmont's most recent Annual Report on Form 10-K, filed on February 24, 2012, and other SEC filings.

Cautionary Statement: Investors are cautioned that statements regarding future exploration results, reserves and non-reserve mineralization contained herein or in other Newmont presentations and press releases are estimates and are forward-looking statements, which are based upon certain assumptions, which may prove to be incorrect. Such assumptions, include, but are not limited to: (i) there being no significant change to current geotechnical, metallurgical, hydrological and other physical conditions; (ii) permitting, development, operations and expansion of the Company's early stage and other projects being consistent with current expectations and mine plans; (iii) political developments in any jurisdiction in which the Company operates being consistent with its current expectations; (iv) certain exchange rate assumptions; (v) certain price assumptions for gold, copper and oil; and (vi) prices for key supplies being approximately consistent with current levels. Where the Company expresses or implies an expectation or belief as to future events or results, such expectation or belief is expressed in good faith and believed to have a reasonable basis. However, such statements are subject to risks, uncertainties and other factors, which could cause actual results to differ materially from future results expressed or implied by the "forward-looking statements". For additional information regarding key risk factors and assumptions, please see Newmont's most recent Annual Report on Form 10-K and other SEC filings. The Company does not undertake any obligation to release publicly revisions to this information to reflect events or circumstances after the date of this document, or to reflect the occurrence of unanticipated events, except as may be required under applicable securities laws. Continued reliance on such estimates is at investors' own risk.

(1) Reserves are calculated at a gold price of US\$1,200, A\$1,250, or NZ\$1,600 per ounce unless otherwise noted. 2010 reserves were calculated at a gold price of US\$950, A\$1,100, or NZ\$1,350 per ounce unless otherwise noted. Tonnage amounts have been rounded to the nearest 100,000 unless they are less than 50,000, and gold ounces have been rounded to the nearest 100,000.

(2) Includes reserves under development at the Emigrant deposits for combined total undeveloped reserves of 1.6 million ounces.

(3) Reserve estimates provided by Barrick, the operator of the Turquoise Ridge Joint Venture.

(4) In-process material is the material on leach pads at the end of each year from which gold remains to be recovered. In-process material reserves are reported separately where tonnage or contained ounces are greater than 5% of the total site-reported reserves and contained ounces are greater than 100,000.

(5) Stockpiles are comprised primarily of material that has been set aside to allow processing of higher grade material in the mills. Stockpiles increase or decrease depending on current mine plans. Stockpile reserves are reported separately where tonnage or contained ounces are greater than 5% of the total site-reported reserves and contained ounces are greater than 100,000.

(6) Project is under development.

(7) Reserves include the currently undeveloped deposit at La Quinoa Sur, which contains reserves of 0.8 million attributable ounces.

(8) Reserves estimates were provided by Buenaventura, the operator of the La Zanja project.

(9) Percentage reflects Newmont's economic interest at December 31, 2011.

(10) Reserve estimates provided by Regis Resources Ltd, in which Newmont holds a 16.85% interest.

(11) Includes undeveloped reserves at Yamfo South, Yamfo Central, Techire West, Subenso South, Subenso North, Yamfo Northeast, and Susuan totaling 3.2 million ounces.

(12) Subika Underground project is under development.

(13) Project is under development.

(1) Mineralized material is reported exclusive of reserves.

(2) Mineralized Material calculated at a gold price of US\$1,400, A\$1,475, or NZ\$1,850 per ounce unless otherwise noted. 2010 Mineralized material was calculated at a gold price of US\$1150, A\$1,350, or NZ\$1,600 per ounce. Tonnage amounts have been rounded to the nearest 100,000.

(3) Mineralized material estimates were provided by Barrick, the operator of the Turquoise Ridge Joint Venture.

(4) Stockpiles are comprised primarily of material that has been set aside to allow processing of higher grade material in the mills. Stockpiles increase or decrease depending on current mine plans.

(5) Mineralized material estimates were provided by Buenaventura, the operator of the La Zanja Project.

(6) Percentage reflects Newmont's economic interest at December 31, 2011.

(7) Mineralized material estimates provided by Regis Resources Ltd, in which Newmont holds a 16.85% interest.
